EXPERIMENT – 01

Forms for Campus Event & Participation Management System

Aim:

To design and develop a set of interrelated data collection forms for a Campus Event & Participation Management System using a low-code application development platform.

Procedure:

1. 1. Student Form Creation:

Create a form named "Student" to capture participant details. Add fields such as Student ID (Auto Number), Student Name, Register Number, Student E-Mail, Phone, Department, Year, and Section.

The screenshot displays a low-code application development platform interface for creating a form named "Student". The interface is divided into three main sections: a "Basic Fields" panel on the left, a central form editor, and a "Field Properties" panel on the right. The "Basic Fields" panel contains icons for various field types: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, and Multi Select. The central form editor shows the "Student" form with the following fields: Student ID (Auto Number), Student Name, Register Number, Student E-Mail, Phone, Department, Year, and Section. The "Field Properties" panel on the right shows the configuration for the "Student ID" field, including its name, link name, validation rules, start index, appearance, and field type (Auto Number). The bottom status bar indicates "Trial has expired | Upgrade" and "Help".

2. 2. Event Form Creation:

Create an "Event" form to define the campus events. Include fields for Event ID (Auto Number), Event Name, Event Type, Description, Event Date, Start

Time, End Time, Venue, Maximum Participants, Organizer, and Event Status.

The screenshot shows the 'Event' form creation interface. The 'Basic Fields' panel on the left lists various field types: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, and Multi Select. The main area displays a list of fields for an 'Event' form: Event ID, Event Name, Event Type, Description, Event Date, Start Time, End Time, Venue, Maximum Participants, Organizer, and Event Status. The 'Field Properties' panel on the right shows settings for the selected 'Event ID' field, including Field name, Field link name, Validation, and Appearance.

3. 3. Registration Form Creation:

Develop a "Registration" form to link students to events. Include lookup fields for Student and Event. Add fields for Registration Date, Participation Type, Registration Status, Registration Timestamp, Is Payment Required, Payment Status, and Additional Notes.

The screenshot shows the 'Registration' form creation interface. The 'Basic Fields' panel on the left lists various field types: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, and Multi Select. The main area displays a list of fields for a 'Registration' form: Student, Event, Registration Date, Participation Type, Registration Status, Registration Timestamp, Is Payment Required, Payment Status, and Additional Notes. The 'Field Properties' panel on the right shows settings for the selected 'Student' field, including Field name, Field link name, Validation, and Data Privacy.

4. 4. Attendance Form Creation:

Build an "Attendance" form to track check-ins. Incorporate lookup fields for Registration, Student, and Event. Add fields for Attendance Date, Attendance Status, Check-in Time, Check-out Time, Remarks, and Created By.

The screenshot displays the 'Attendance' form creation interface. On the left, a 'Basic Fields' panel lists various field types: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, and Multi Select. The main area shows a list of fields to be added to the form: Registration, Student, Event, Attendance Date, Attendance Status, Check-in Time, Check-out Time, Remarks, and Created By. The 'Registration' field is selected, and its properties are shown in the 'Field Properties' panel on the right. The properties include: Field name (Registration), Field link name (registration), View Field References, Validation (Mandatory, No duplicate values), Initial value (Initial value), Character maximum (255), Data Privacy (Contains personal data), Data Security (Encrypt data, Contains health info), and User Input (for mobile). The bottom of the screen shows a navigation bar with 'My File', 'Charts', and 'Contacts' icons, and a status bar indicating 'Trial has expired | Upgrade' and 'Help'.

5. 5. Certificate Form Creation:

Design a "Certificate" form for issuing credentials. Use lookup fields for Student and Event. Include fields for Certificate Number, Certificate Type, Issue Date, Certificate Status, Certificate File (File Upload), Remarks, and Generated By.

Campus Event & Participation M...
Certificate

Basic Fields

- Name
- Email
- Address
- Phone
- Single Line
- Multi Line
- Number
- Date
- Time
- Drop Down
- Radio
- Multi Select

Student

Event

Certificate Number

Certificate Type

Issue Date

Certificate Status

Certificate File

Remarks

Generated By

Field Properties

Field name: Student

Field link name: student

View Field References

Validation

☐ Mandatory ☐ No duplicate values

Initial value

Initial value

Character maximum: 255

Data Privacy

☐ Contains personal data(個人情報)

Data Security

☐ Encrypt data ☐ Contains health info(健康情報)

User Input (for mobile)

Trial has expired | Upgrade Help

Conclusion:

The structural forms for the Campus Event & Participation Management System were successfully designed and implemented. By utilizing a low-code platform, distinct modules for managing students, events, registrations, attendance, and certificates were successfully created and interlinked to streamline campus event operations.
