EXPERIMENT – 03

Application building using Zia Assistant

(Campus Event & Participation Management System)

Aim:

To automatically generate a functional Campus Event & Participation Management System application using the AI-driven Zia assistant in a low-code development platform, based on natural language prompts.

Procedure:

1. 1. AI Assistant Prompting:

Open the App Builder and utilize the Zia assistant. Provide a natural language prompt instructing the AI to "Create a simple Campus Event & Participation Management System." Specify constraints such as keeping the application minimal and avoiding unnecessary modules or advanced features.

2. 2. Data Model Review:

Review the Data Model generated by Zia based on the prompt. Verify that the necessary entities, such as "Events" and "Participation", have been created with appropriate fields (Event Name, Date, Student Name, Participation Status, etc.) and linked appropriately.

3. Application Creation:

Confirm the build process. Once the application is successfully created by the AI, click "Access Application" to enter the live workspace.

4. 4. Dashboard Monitoring:

Navigate to the automatically generated Dashboard. Observe the AI-created graphical metrics, such as scatter plots for Registered vs. Maximum Participants, bar charts for Event Types, and KPI widgets summarizing attendance counts (Attended, Not Attended, Registered).

5. 5. Managing Events Data:

Access the "Events" view module. Verify the data layout containing event details like Event Type, Date, Time, Venue, Organizer, and Participant limits for events like Sports Day Championship or Tech Innovation Expo.

6. 6. Managing Participations Data:

Access the "Participations" view module. Check the list of registered students, their respective departments, participation dates, participation statuses (Attended, Not Attended, Registered), and the linked events.

The screenshot displays the 'Participations' view module of the Campus Event Management System. It shows a table titled 'All Events' with columns for Event Name, Event Type, Event Date, Event Time, Venue, Organizer, Maximum Participants, Registered Participants, and Event Description. The table lists five events: Sports Day Championship, Art and Culture Festival, Tech Innovation Expo, Graduation Ceremony, and Science Fair 2026.

Event Name	Event Type	Event Date	Event Time	Venue	Organizer	Maximum Participants	Registered Participants	Event Description
Sports Day Championship	Workshop	28-Sep-2026	08:00:00	Stadium Field	Sports Association	600	580	Inter-house athletic competition featuring
Art and Culture Festival	Technical	25-Sep-2026	11:00:00	Garden Lawn	Arts Department	400	390	Display of paintings, sculptures, and tradi
Tech Innovation Expo	Seminar	22-Sep-2026	09:00:00	Innovation Hub	Tech Society	300	275	Exhibition of latest gadgets and software students.
Graduation Ceremony	Technical	20-Sep-2026	14:00:00	Central Plaza	Student Council	1000	950	Celebrating the achievements of graduati departments.
Science Fair 2026	Workshop	17-Sep-2026	10:00:00	Main Auditorium	Science Club	500	485	Annual showcase of student scientific pro

Conclusion:

The Campus Event & Participation Management System was successfully generated using the AI-driven Zia assistant. This experiment demonstrated the capability of generative AI to instantly translate natural language requirements into a fully functional data model, complete with relational databases, list views, and analytics dashboards, thereby significantly accelerating the application development lifecycle.
